European Commission Approves Merck's KEYTRUDA

25/02/2021 · The treatment of non-small-cell lung carcinoma (NSCLC) has changed markedly in recent years as a result of two major treatment milestones: Targeted therapy and immunotherapy. Since 2015, immunotherapy has been changing the paradigm of NSCLC treatment in different settings and has contributed to improve the quality of life of these …

01/02/2022 · An experimental form of immunotherapy that uses an individual's own tumor-fighting immune cells could potentially be used to treat people with metastatic breast cancer, according to results from an ongoing clinical trial led by researchers at the National Cancer Institute’s (NCI) Center for Cancer Research, part of the National Institutes of Health.

2 days ago · Corrigendum to “A phase 1b study of intraperitoneal oncolytic viral immunotherapy in platinum-resistant or refractory ovarian cancer” [Gynecologic Oncology 163 (2021) 481–489] Manyam et al. Published online: February 24, 2022. Full length article. Incidence of postoperative thrombotic events in ovarian cancer patients with a de-escalated prophylactic strategy: A …

18/10/2021 · Stage 4 renal cell carcinoma is an aggressive form of kidney cancer in which cancer cells have spread beyond the kidneys into other organs and tissues in the body. Treatment options may include surgery, radiation therapy, immunotherapy, and targeted therapies. Pain management and support resources will also be an important part of the treatment plan.

01/05/2018 · In a first cohort, approximately half of patients with metastatic melanoma or synovial cell sarcoma who received NY-ESO-1 transduced CD8+ T cells and IL-2 showed a clinical response. 2 out of 11 metastatic melanoma patients exhibited a complete response and 1 patient had a partial response. Four out of six patients with synovial cell sarcoma experienced partial …

27/01/2022 · “KEYTRUDA is the first adjuvant therapy approved for certain patients with renal cell carcinoma in Europe, providing the option of immunotherapy earlier in the course of their treatment,” said

05/05/2021 · Transitional cell carcinoma is a cancer that forms in a type of epithelial tissue called transitional epithelium, or urothelium. This tissue, which is made up of many layers of epithelial cells that can get bigger and smaller, is found in the linings of the bladder, ureters, and part of the kidneys (renal pelvis), and a few other organs. Some

Immunotherapy and targeted therapy have improved the outlook for metastatic RCC. RCC Metastatic renal cell carcinoma (mRCC) is the spread of the primary renal cell carcinoma from the kidney to other organs. 25–30% of people have this metastatic spread by the time they are diagnosed with renal cell carcinoma. This high proportion is explained by the fact that clinical …
